

Metropolitan Natural Gas Reliability Project – Phase 1

Over the next several years, National Grid will be making significant investments to modernize its natural gas system in Brooklyn. This project, which will be done over five phases, is called the Metropolitan Natural Gas Reliability Project, which will help improve safety, reliability and make available much-needed gas capacity to support economic growth.

The project's major route will run through Eastern and Northern Brooklyn from Linden Boulevard in Brownsville to Maspeth Avenue in Greenpoint. When all phases of this project are complete, we expect to install about seven miles of new gas main and a new regulator station.

Phase 1 project timeline*

Phase 1 of the project (see map on back) involves installing about 1.4 miles of new gas main from Linden Boulevard to Glenmore Avenue. Construction is scheduled to begin in May 2017 and end in December 2017. It will be necessary to impose temporary no parking zones for construction activities and signs will be posted in the affected areas in advance. Our pledge is to work together with all customers and communities to keep them informed of the project timeline and complete the project safely, while minimizing any disruption to homes or businesses. To accomplish this, most of the work will be performed during the day and on weekends, with some work performed at night due to traffic considerations and permit stipulations.

Project benefits

- A safer, more reliable, resilient and flexible natural gas system.
- Enables economic growth.
- Further accelerates our Gas Main Replacement Program that retires aging pipes.
- Supports New York City's Clean Heat Initiative.

We're committed to safe, reliable gas networks that promote growth in the communities we serve.

Our number one priority is the safety of the public, our customers and our employees. To that end, we're committed to the safe and reliable operation of our natural gas facilities and making significant investments to modernize the natural gas infrastructure in New York City.

These investments will focus on:

- Accelerating the removal of older mains and services to enhance the safety and integrity of our gas distribution system.
- Improving system resiliency through extreme weather events by installing remote operating valves.
- Installing and upgrading mains and other facilities to accommodate growth.

National Grid is the largest distributor of natural gas in the northeast US, serving more than 3.6 million customers in Massachusetts, Rhode Island and New York. In New York, National Grid owns and operates three gas distribution utilities that provide services to more than 2.4 million customers in Upstate New York, Long Island and New York City (Brooklyn, Staten Island and parts of Queens).
